

Cascading Style Sheets(CSS)

Treemiti Informatics

What is CSS?

- CSS stands for Cascading Style Sheets
- CSS introduced in 1996 by the W3C
- CSS Styles define how to display HTML elements in browser
- CSS Styles were added to **HTML 4.0** to solve presentation issues

INFORMATICS

Advantages of using CSS

- Same style rules on multiple elements
- Control presentation of multiple pages with single stylesheet
- Can style dynamic states of elements (hover, focus, etc.)
- Changing position of elements
- Transform elements (scale, rotate, etc.)
- Animation and transition effects
- Pages load faster
- Easy maintenance
- Save lots of time

Implementation of CSS

Three ways to include CSS in HTML

1. Inline Styles

- Using style attribute in HTML elements start tag
- Use Property and value pairs separated by ;
- **Example** : `<p style="color:#ff0000; font-size:16px ">Text Content</p>`

2. Embedded / Internal Styles

- Only effect in same document
- Defined in **<style>** element of documents **<head>** section
- Defined using CSS rules / selectors
- **Example** :

```
<style>
  body { background-color:#ff9900; }
  p {color:#ff9900; }
</style>
```

Implementation of CSS

3. External Style Sheets

- Can be applied to many pages
- Multiple style rules / selectors in separate document
- Two ways to attach **Linking, Importing**
- **Example** : External style sheet file using **<link>** tag in **<head>**
 - `<head>`
 `<link href="styles.css" rel="stylesheet">`
 `</head>`
- **Example** : Using **@import** rule inside **<style>** tag inside **<head>** tag
 - `<head>`
 `<style>`
 `@import("styles.css")`
 `</style>`
 `</head>`

CSS Syntax

A CSS rule has two main parts : **a selector**, and **one or more style declarations**

- The selector is normally the HTML element you want to style.
- Each declaration consists of a property and a value.
- The property is the style attribute you want to change. Each property has a value.
- Use /* -comment - */ to write comments in css file
 - **Example :** P { text-align:center; /*This is another comment*/ color:black; font-family:arial; }

CSS Rules / Selectors

- **CSS Rules / Selectors** are used to select specific element in HTML document.
- As CSS is continuously evolving its rules are also increasing rapidly.
- The CSS 3.0 has following main set of selectors
 - Universal
 - Type
 - Grouping
 - Class
 - ID
 - Descendants
 - Child
 - Adjacent Siblings
 - General Siblings
 - Attributes

TREEMITITM
INFORMATICS

CSS Rules / Selectors : Main

Type	Description	Example
Universal	Any element	<code>* { font: 10px Arial; }</code>
Type	Any element of that type	<code>h1 { text-decoration:underline; }</code>
Grouping	Multiple elements of different types	<code>h1, h2, h3 { font-family:Verdana; }</code>
Class	Multiple elements of different types when you don't want to affect all instances of that type	<code>.sampleClass { text-decoration:underline; }</code>
Id	A single element type when you don't want to affect all instances of that type	<code>#sampleID {text-decoration: underline; }</code>
Descendant	An element that is below (in the document tree) another element - no matter how many levels below	<code>#gallery h1 { text-decoration: underline; }</code>
Child	An element that is directly below (in the document tree) another element	<code>#title > p { font-weight:bold; }</code>
Adjacent Sibling	All elements that share the same parent and elements are in the same immediate sequence	<code>h1 + p { font-style: italic; }</code>
General Sibling	All elements that share the same parent and elements are in the same sequence (not necessarily immediate)	<code>h1 ~ p { font-style: italic; }</code>

CSS Rules / Selectors : Main

Type	Description	Example
Attribute	An element that matches the attribute listed	E[selected] - att whatever the value
		E[att = "val"] - att with a specific value
		E[rel ~= "next"] - att with a value is a whitespace separated list
		E[att = "val"] - att value either being exactly "val" or beginning with "val" immediately followed by "-"
		E[att ^= "val"] – att value that begins with the prefix "val"
		E[att \$= "val"] – att value that ends with the suffix "val"
		E[rel *= "val"] - att with a "val" available anywhere in a value word

CSS Rules / Selectors : Psuedo

TYPE	Description	TYPE	Description
:active	an activated element	:nth-child(n)	an element that is the n-th sibling
:focus	an element while the element has focus	:nth-last-child(n)	an element that is the n-th sibling counting from the last sibling
:hover	an element when you mouse over it	:first-child	an element that is the first sibling
:link	an unvisited link	:last-child	an element that is the last sibling
:disabled	an element while the element is disabled	:only-child	an element that is the only child
:enabled	an element while the element is enabled	:nth-of-type(n)	an element that is the n-th sibling of its type
:checked	an element that is checked	:nth-last-of-type(n)	an element that is the n-th sibling of its type counting from the last sibling
:selection	an element that is currently selected or highlighted by the user	:last-of-type	an element that is the last sibling of its type
:empty	an element that has no children	:first-of-type	an element that is the first sibling of its type
:root	root element within the document	:only-of-type	an element that is the only child of its type

CSS Rules / Selectors : Psuedo

TYPE	Description	TYPE	Description
:not(x)	an element not represented by the argument 'x'	::first-letter	Adds special style to the first letter of a text
:target	a target element as specified by a target in a UR	::first-line	Adds special style to the first line of a text
:lang	allows the author to specify a language to use in a specified element	::before	Inserts some content before the content of an element
		::after	Inserts some content after the content of an element

I N F O R M A T I C S

Measurements

Absolute Measurements		Relative Measurements	
%	percentage	ch	width of the “0” glyph found in the font for the font size used to render
cm	centimeter	em	1em = current font size of current element
in	inch	ex	x-height of the element’s font
mm	millimetre	gd	the grid defined by ‘layout-grid’
pc	pica (1p = 12 points)	rem	the font size of the root element
pt	point (1pt = 1/72 inch)	vh	the viewport’s height
px	pixel (1px = 1/96 inch)	vw	the viewport's width
		vm	viewport’s height or width, whichever is smaller of the two

Units / Values

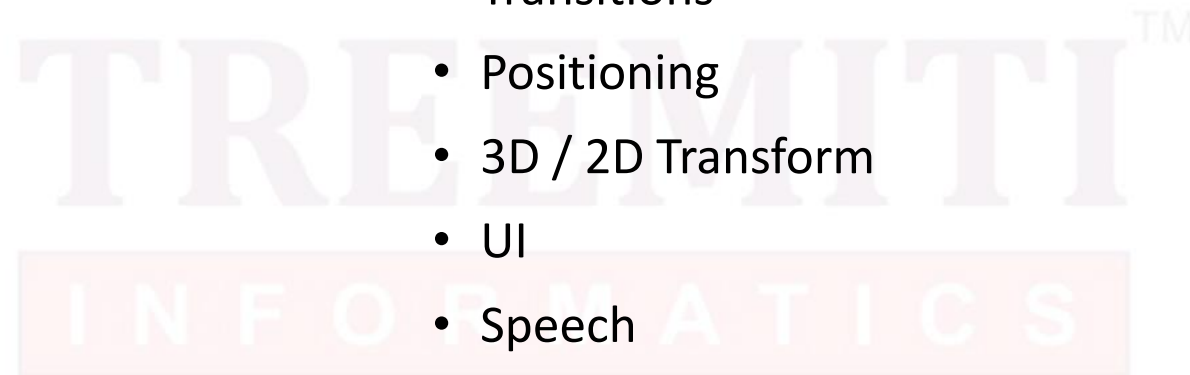

Units		Color Values	
Angle Units			
deg	degrees	color name	red, blue, green, dark green
grad	grads	rgb(x,y,z)	red = rgb(255,0,0)
rad	radians	rgb(x%,y%,z%)	red = rgb(100%,0,0)
turn	turns	rgba(x,y,z,alpha)	red = rgba(255,0,0,0)
Time Units		#rrggbb	red = #ff0000 (or shorthand - #f00)
ms	mili-seconds	hsl(hue, saturation, lightness)	red = hsl (0, 100%, 50%)
s	seconds	flavor	An accent color (typically chosen by the user) to customize the user interface of the user agent itself.
Sound Units		currentColor	computer value of the 'currentColor' keyword is the computed value of the 'color' property
Hz	hertz		
kHz	kilo-hertz		

CSS Style Groups

CSS styles are mainly grouped into following categories

- Font
- Text
- Column
- Table
- List & Markers
- Colors
- Box Model
- Backgrounds
- Border
- Outline
- Animations
- Transitions
- Positioning
- 3D / 2D Transform
- UI
- Speech
- Generated Content
- Line Box
- Hyperlink
- Paged Media
